WHO AM I?

Fullstack engineer with 9+ years experience, including building the first products on the Massa Labs blockchain. Led dev teams of 5+ as CTO and co-founder of two startups, guiding development of blockchain platforms. Quick learner who thrives solving complex problems through an iterative process. Team player focused on scalable code, agile methodologies, and sharing knowledge. Passionate about leveraging Ethereum, Cosmos and other blockchain innovations to transform industries.

EXPERIENCE

12/2023 - Ongoing — **Senior Software Engineer Web 3** — **XXXX NDA**

As a Senior Software Engineer at XXXX, Leader on the Frontend, Integrating all the Dapp and interactions with Smart Contracts. This Dapp was a Top tier Dapp on DEFI with millions of UAM. With complex UX and smart integrations, with some products tasks i've built the backlog and lead the frontend tasks from A to Z

`NextJs - React  /  Wagmi  /  Solidity  /  NodeJs  /  Tailwind`

10/2022 – 6/2023 — **Senior Software Engineer Web 3** — **Massa Labs**

As a Senior Software Engineer at Massa Labs, I spent 9 months building front-end focused blockchain products as part of a 10-person team, making key contributions like developing the core UI kit used across all products. I leveraged my specialized front-end expertise to create multiple applications leveraging Massa blockchain to solve real-world problems.

`NextJs - React  /  Golang  /  Assembly Script  /  NodeJs`

From 2019
Freelance — **Full stack Developer Web 3** — **Contractor**

As an autonomous freelance full-stack developer since 2019, I've participated in the management/helping of critical project during the Bullrun period, earning communication and blockchain development skills. I provided end-to-end responsibility for clients requiring complex decentralized applications, solving concrete problems of my clients. Projects close to launch called me for help to fix their Dapps

`React  /  Solidity  /  NextJS  /  VueJs  /  NodeJS  /  GraphQL  /  EtherJs`

2014 – 2020
Service company — **Software Engineer** — **Atos**

As a Software Fullstack Engineer at Atos, I worked on aeronautics, nuclear, and defense projects for clients including Airbus and Department of Defense, independently building and selling a profitable product to Airbus early in my career. My time at Atos sharpened my technical skills across the Microsoft stack as a versatile fullstack developer.

`C#  /  .NET  /  JS  /  HTML  /  SQL`

SIDE PROJECT

| 1/2023 | **Oxyzon** | **CTO - Co Founder** |

As CTO and co-founder of Oxyzon, I single-handedly developed a novel mirror trading platform on Uniswap that allows traders to monetize their membership base by having their token swaps mirrored to subscribers while earning royalties on profitable trades. This decentralized application provides an unique way to earn passive income opportunities for traders and investors alike by connecting alpha seekers with proven gem hunters on the Ethereum blockchain.
- Still Building , Beta before End of Q4

| 2022 | **Portals Finance** | **CTO - Co Founder** |

As CTO and co-founder of Portals Finance, i've co-developed with a junior Dev an interactive Dapp to implement Smart Contracts. I was in charge of managing 7 peoples to coordinate strategics decisions and actions. We were upgrading a previous "P2E" in Avalanche Blockchain called "Tavern".
- Canceled at launch due to Market Crash

| 2021 | **Pitching Platform** | **Solo Founder** |

I've worked in solo on a "Pitching Platform", built Mocks and started to create MVP. I have upgraded my UX skills and use this project to learning skills in the Business Plan and Business creation. The pitch was: Connecting Founders and VCs. But the product market fit was too complex to find and the concurrent were strong.
- Canceled due to complexity
